

A Smart Home Begins With A Smart Lock

At Clare, we have tinkered, disassembled, tested, and evaluated every feature to find the best smart locks available. Smart locks sold by Clare are guaranteed to work with your ClareHome System and are simple to install without professional installation. Our smart locks can be programmed to use personalized pin codes or operated remotely through the ClareHome App. All smart locks sold by Clare are Z-Wave compatible. Z-Wave operates on a secure wireless signal and is used for communication between devices.

Know the Basics of Z-Wave Smart Home Connected Door Locks

All Clare smart door locks come standard with **7-day a week ClareCare Support** to help you with any installation and programming needs!

Installation and Programming

Included with each lock are illustrated instructions depicting the entire installation process as well as how to program the lock. Some locks even offer **voice assisted programming** which helps assist with the entire programming sequence.

Security

All locks sold by Clare are motorized and can be controlled with your ClareHome System or can be used as a standalone lock. **Enable additional security features through ClareHome:** push notifications, remote locking or unlocking, real time lock status updates and more. Hardened metal housings protect the interior mechanics from forced damage.

Personalized Features

ClareHome locks can be programmed to accept **multiple personalized pin codes**. Easily setup email, text, or push notifications to notify you if your door is unlocked or locked.

Capacitive vs Resistive Touchscreens

Capacitive touchscreens have a sharper interface, are highly accurate, and respond instantly to touch through conductivity. They are often more durable, allowing them to work after a scratch or small amount of damage. **Resistive touchscreens** rely on the physical pressure on the top layer of the touchscreen. Because it does not use conductivity from the human body, it can be interacted with by materials such as a gloved-finger, fingernail, or anything that creates enough physical pressure.

Keyless or Keyed Entry

Some models include a keyed lock cylinder which can be used in conjunction with the pin code. Some **smart re-key systems** allow the lock to be re-configured to accept your existing keys. Keyless locks prevent lock picking or drilling of the cylinder. Both types of locks can be operated remotely through the ClareHome App.

Color Options

All smart locks sold by Clare are **offered in multiple colors**. Options include: brass, bronze, and nickel to match any existing door hardware.

Features

Specifications

Push Button Key-Free
YRD110ZWXXX

- Silicone gasket prevents weather corrosion
- Case hardened pin in deadbolt prevents tampering and cutting
- Up to 1-year battery life with regular use
- Protective housing strengthens against forced drilling

Touchscreen Key-Free
YRD120ZWXXX

- 9V battery can re-power lock if batteries are depleted (YRD110ZWXXX and YRD120ZWXXX)
